

DV UNIT

DV Unit is a compact DV camera control vehicle designed to support multi-camera DV shoots. With the ability to control up to 6 Sony DV cameras, it can provide them with timecode, sync pulses, racking control and tally lights. A small vision mixer is also included and this can be recorded to DigiBeta and VHS or DVD. DV Unit works best with cameras that have an SDI digital output, however, it can also work with Analogue PAL outputs if required. It can control DV cameras up to 100m away as standard, further distances can be arranged on request.

SPECIFICATIONS

DIMENSIONS

Length 5.73m
Width 2.6m
Height 1.95m

WEIGHT

3.5 Tonnes
